Alejandro Rey

DevOps Engineer | CI/CD, Kubernetes, AWS, Terraform, Test Automation

Buenos Aires, Argentina | reyalejandrojoaquin@gmail.com | linkedin.com/in/alejandro-joaquin-rey | reyalejandro.github.io | Remote or hybrid

Professional Summary

DevOps Engineer with 2 years of experience serving banking clients in Argentina and Chile, now building a full-stack ecommerce of my own. I design CI/CD pipelines with Jenkins and Azure DevOps, containers with Docker and Kubernetes, infrastructure as code with Terraform on AWS and Google Cloud, and test automation with Selenium, JUnit, JMeter, Postman and Cucumber. I connect continuous delivery with quality: every change ships with its automated test.

Core Skills: CI/CD, DevOps, QA Automation, Infrastructure as Code, Docker and Kubernetes, Cloud (AWS, GCP), REST API Testing, Load Testing, BDD and TDD, Observability, Privileged Access Management, Scrum and Kanban

Professional Experience

Full Stack Developer (own project) — Master Pet
Remote | 2026 – present

- Built an ecommerce with Astro and TypeScript on the frontend, Medusa on Node.js on the backend, and PostgreSQL: catalog, guest cart, coupons, shared stock and order management.
- Integrated payments with Mercado Pago Checkout Pro, with payment reconciliation and idempotency, plus shipping quotes by postal code.
- Implemented 250+ automated checks (unit, HTTP and end-to-end with Playwright) covering concurrency, duplicate payments and failure recovery, running on GitHub Actions.
- Set up an isolated staging environment with Docker on WSL, automations with n8n and error monitoring with Sentry.
- Work with AI agents (Claude Code and Codex) under TDD and code review.

DevOps Engineer — Tsoft
Buenos Aires, Argentina | 10/2021 – 09/2023

- Built CI/CD pipelines for banking clients with Jenkins, Azure DevOps, Maven, Gradle, Git, Docker, Kubernetes, SonarQube and Terraform on AWS and Google Cloud, with test management in Jira Xray.
- Designed the technical proposal and implemented continuous integration for the DevOps-SCM service of Banco Consorcio (Chile) with Jenkins, Jira, Xray, Maven, JMeter, AWS EC2 and S3.
- Automated functional, regression, load and REST API tests with JUnit, Selenium, JMeter, Postman and Cucumber with Gherkin (BDD).
- Managed and monitored virtual machines with CyberArk (privileged access management) and Dynatrace (observability).
- Automated two-way synchronization between two Jira instances with Automation Rules: creation, cloning, updates (including issue type) and simultaneous deletion.

Web Developer (freelance) — Master Pet
Remote | 06/2021 – 07/2021

- Designed and developed the brand website: interface, content and visual identity.
- Configured and supervised hosting to ensure good performance.

Technical Skills

CI/CD: Jenkins, Azure DevOps, GitHub Actions, Git, Maven, Gradle

Cloud and infrastructure: AWS (EC2, S3), Google Cloud (GCP), Terraform, Ansible, Linux

Containers: Docker, Kubernetes

Testing and QA: Selenium, JUnit, Playwright, JMeter, Postman, Cucumber, Gherkin, BDD, TDD, SonarQube

Security and observability: CyberArk, Dynatrace, Sentry

Languages and development: Python, Java, TypeScript, JavaScript, Node.js, SQL, PostgreSQL, Astro, Medusa

Management and methodologies: Jira, Jira Xray, Jira Automation Rules, Scrum, Kanban, Agile, Waterfall

Automation and AI: n8n, Claude Code, Codex
